Dear Mr. Esfandiari,

Re:
Medico-Legal Report

Summary of Education, Training and Experience

I completed medical school in 1990 at the University of Nigeria, Enugu, Nigeria. Upon graduating from medical school, I completed a one-year clinical housemanship at the University of Nigeria Teaching Hospital in the fields of pediatrics, internal medicine, general surgery, obstetrics, and gynecology. After housemanship, I worked as an emergency room physician at a university hospital in Nigeria for approximately three years. I sat for and passed my United States Medical Licensing Examinations [USMLE] while I worked as an emergency room physician. I came to the United States in 1994 through a World Health Organization scholarship to become a visiting research scholar for eight months at the Department of Epidemiology, Graduate School of Public Health, University of Washington, Seattle, Washington.

In 1995, I proceeded to the College of Physicians and Surgeons of Columbia University, New York, New York, at Harlem Hospital Center, to complete residency training in Anatomic Pathology and Clinical Pathology. In 1999 I proceeded to the University of Pittsburgh, Pittsburgh, Pennsylvania to complete residency training in forensic pathology and neuropathology. I hold four board-certifications in Anatomic Pathology, Clinical Pathology, Forensic Pathology and Neuropathology. I also hold a Masters in Public Health [MPH] degree in Epidemiology from the Graduate School of Public Health, University of Pittsburgh, Pittsburgh, Pennsylvania. I also hold a Masters in Business Administration [MBA] degree from the Tepper School of Business, Carnegie Mellon University, Pittsburgh, Pennsylvania, one of the leading business schools in the world. I am a Certified Physician Executive and an honorary fellow of the American Association of Physician Leadership [AAPL]. I also hold a fifth board-certification in medical management from the AAPL. I am licensed to practice medicine and surgery in four states in the United States namely Hawaii, California, Indiana, and Pennsylvania.

I am currently the President and Medical Director of Bennet Omalu Pathology [BOP], a California medico-legal consulting firm, and a Clinical Professor at the Department of Medical

Pathology and Laboratory Medicine, University of California, Davis. In my capacity as the Medical Director of BOP, I am a consulting forensic pathologist and neuropathologist to many hospitals in central California and to several counties in northern California. There are less than a few dozen practicing forensic pathologists-neuropathologists in the United States who are board-certified in both forensic pathology and neuropathology.

For over twenty years, I have been involved in over ten thousand death and injury investigations in my career as a forensic pathologist and neuropathologist, which began in 1999. I have personally conducted and performed over nine thousand autopsies and death investigations and examined over ten thousand brain tissue specimens. I also perform trauma pattern analysis in both living patients and deceased patients to determine causes and mechanisms of sustenance of injuries and death. I am also involved in the evaluation of living victims of all types of injuries and trauma, including but not limited to victims of assault, traumatic falls, industrial and accidental injuries, medical complications and misadventures, rape, child abuse and sports-related injuries. I have been consulted and retained as an expert witness in one to two thousand cases involving all types of medico-legal cases across all jurisdictions in the United States including federal, state, county and municipal courts and arbitration panels; in both civil and criminal cases, for the plaintiff, defense, district attorneys and public defenders. I have been involved as an expert witness in complex class action and industrial lawsuits involving thousands of individuals and major corporations.

My areas of interest and focus include brain patho-physiology, brain injuries and brain trauma, in both living and deceased patients. I identified Chronic Traumatic Encephalopathy [CTE] in a retired football player when I performed an autopsy and examined the brain of Mike Webster in 2002. Subsequently, I identified CTE in other high-impact, high-contact sports athletes and in military veterans suffering from Post-Traumatic Stress Disorder [PTSD]. Since 2002 CTE has received international attention from the sports industry, sports medicine, and neuroscience. My work has been featured extensively in all media platforms across the world. My work and life were featured in a major Hollywood film, "Concussion" released in December 2015 by Sony Motion Pictures, in which the renowned actor, Will Smith, played me as Dr. Omalu. Several New York Times best-selling books have also been published on my life and work including "The League of Denial" and "Concussion". I have published several books including my memoir, "Truth Doesn't Have a Side", which was published in August 2017. My latest book, "Brain Damage in Contact Sports" was published in February 2018. I have published extensively in the medical and scientific literature authoring many scientific papers and book chapters.

I have received three honorary PhD degrees from two universities in the United States, and from the Royal College of Surgeons of Ireland in recognition of my work and expertise. I have also received numerous awards from across the world in recognition for my work and expertise in both living and deceased patients. I have received the "Distinguished Service Award" from the American Medical Association [AMA], which is the most prestigious award of the AMA. I have been honored by the United States Congress and I have appeared on multiple occasions before committees of the United States Congress and committees of State Legislatures across the United States advising them on matters relating to trauma. In 2019 and 2020 I was appointed to the Traumatic Brain Injury Board of the State of California to advise the state on matters relating to traumatic brain injuries.

Since 1999 I have testified as an expert witness in matters relating to all types of injuries and deaths in over 500 court proceedings across the United States. I have attached a copy of my curriculum vitae, which enumerates my body of work and experience in greater detail. I have also attached my fee schedule. The cases I have testified in, beginning in 2009, are enumerated at the end of my curriculum vitae.

Medico-Legal Questions

1. Does ECT cause brain injury?

It is a generally accepted principle and common knowledge in medicine, forensic pathology, and neuropathology that specific injury events and modalities generate predictable, reproducible, and established specific patterns and mechanisms of injuries in the cells, tissues, organs, and systems of the body. The patterns of injuries generated by the transmission of electrical energy and electroshock to the human body, and the mechanisms of sustenance of these patterns of injuries are very well-established in the medical literature and are common knowledge, which can be readily found in reference textbooks of medicine, neuroscience, and neuropathology. Yes, ECT causes brain injury and brain damage based on these generally accepted principles and common knowledge of medicine, forensic pathology, and neuropathology.

The human brain is a very unique organ that is different from other organs in the human body. The human brain is a post-mitotic organ, which means that the human brain cell or neuron does not divide to create new brain cells and rejuvenate itself. The human brain cell does not have any reasonable capacity to regenerate itself. This means that after birth, we can only lose brain cells and cannot create new brain cells like other cells in other tissues and organs of the body. If a brain cell suffers an irreversible cellular injury, that brain cell is permanently damaged or dies and is not replaced by a new brain cell. Additionally, as a post-mitotic organ, the human brain exhibits the phenomenon of cumulative injury, whereby the brain cells remember and suffer from the cumulative injury effects of repeated exposure to injury over short and long periods of time. The eventual and final patho-physiological outcomes and manifestations of brain injury result from the accumulation of all the cellular injuries suffered over time. Once permanent injury has occurred, novel patho-physiological mechanisms can be instigated to result in progression of the injury into a chronic and progressive encephalopathy and brain degeneration over time. The more repetitive an injury exposure may be, the greater the likelihood of irreversible, permanent, and progressive brain damage, without any established threshold for injury or absolute or direct correlation between number of repeated injuries and predictable severity of long-term injury and damage.

These basic and fundamental pathophysiology of the human brain and nervous system applies to all modalities of energy transmission to the brain and injuries of the brain including electrical energy transmission and electrical injuries of the brain.

The primary objective of an ECT machine is to generate electrical energy and transmit that energy to the human brain to intentionally cause physiological, biochemical, and anatomic cellular injuries to the human brain cells, induce electrical excitation and generalized seizures as a perceived therapeutic agent and mechanism. As Kenneth R. Castleman's report has illustrated, the modern ECT machine generates electrical energy and delivers and transmits electrical current into the human head and brain in short pulses, as short as one millisecond, separated by longer periods during which the current is not flowing. The amount of electricity delivered to the patient's head and brain by an ECT machine can be measured in joules or in coulombs.

Modern ECT machines can deliver 100 joules of energy or one-half coulomb of charge in the United States and 200 joules and one coulomb in Europe and Asia. They are constant-current

pulse generators that can automatically and continuously adjust the voltage, as necessary, to maintain the current at a specified level. The dose may be delivered at a pulse frequency of 70 Hertz [70 positive and 70 negative pulses every second, delivered in alternation] for a period of 7.2 seconds for a total of 1008 pulses. Each pulse is 0.3 milliseconds in duration with 6.84 milliseconds of dead time where the current is not flowing between pulses. The pulse frequency can be set between 10 and 70 cycles per second and the pulse can be as brief as 0.3 milliseconds. The current is typically set at 0.9 amps and thus the brain is subjected to over a thousand alternating positive and negative current pulses of almost one amp each.

According to Dr. Castleman's report, voltage equals current times resistance according to Ohm's law. The resistance of the patient's head varies and ranges from 1,440 ohms to 260 ohms prior to and during treatment, respectively. The voltage therefore can be in the range of 230 volts and can go up to 460 volts as needed to overcome the patient's resistance.

The fundamental unit and foundation of electrical signaling and functioning of the human brain and nervous system is the action potential [AP], which is created by electrogenic Sodium-Potassium [Na⁺-K⁺] membrane ionic pumps/ channels. The resting membrane potential of the human brain cell and membrane is -90mV and the generation of an AP from this resting membrane potential to depolarization at about +10 mV lasts only few 10,000th of a second [1/10,000 seconds] for the activation and inactivation of the sodium membrane channels. For a single ECT treatment the dose is delivered at about 1000 pulses at up to 460 volts per pulse. This results in 460,000 volts, which is 5 million times the resting membrane potential of a human brain cell and membrane. While the activation and generation of an AP lasts only few 10,000th of a second, the duration of each pulse of the ECT machine is about 0.3 milliseconds, with up to 70 pulses per second for up to 7.2 seconds, which is a duration that is about 70,000 times the duration of an AP.

Any factor that undermines, impairs, and alters the delicate physiological and biochemical homeostatic milieu of the human brain has a significant potential to cause brain injury and damage, if adequately sustained and persistent. The amounts of electrical energy introduced to the human brain by ECT machines can be nothing but harmful and dangerous. These amounts of energy are exponentially outside the tolerable homeostatic ranges and thresholds of the human brain and nervous system and will no doubt, and are in fact expected to cause cellular physiologic, biochemical, and anatomic injuries to the human brain cells. Since the human brain is post-mitotic and cannot completely regenerate itself following such injuries, and since such ECT-induced electrical injuries occur repeatedly over time, the patient who receives ECT therapy will manifest permanent and cumulative brain injury, which can be progressive over time and result in chronic encephalopathies and brain degeneration. Such brain degeneration can manifest with multi-domain neurological impairments including cognitive impairment, mood disorders and neuro-psychiatric impairment, behavioral impairment, motor disorders and other somatic symptoms and signs.

2. What is the mechanisms of brain injury causation by ECT?

The mechanisms of sustenance of electrical injuries of the brain and other types of injuries including thermal and traumatic brain injuries from thermal and kinetic energies are very well established and are common knowledge, which can be readily found in reference textbooks of medicine, neuroscience, and neuropathology.

Electrical excitation of the brain initiates and activates mitochondrial failure of energy and Adenosine Triphosphate [ATP], membrane depolarization, excitotoxicity, free radical formation, calcium ion influx, calpain-induced proteolysis, phospholipase-induced membrane changes, mitochondrial dysfunction, caspase activation, lysosomal enzyme release including cathepsins and granzymes and ultimately neuronal and glial cell injury, neuronal death, astrocytic and microglial activation and proliferation, chronic inflammation and cytokines production, and programmed mechanisms involving specific signaling and molecular pathways that result in delayed cell death and neurodegeneration.

High-scale electrical excitation of the human brain depresses ATP synthesis with failure of membrane ion pumps, which remain persistently open, irreversible cell membrane failure, membrane perturbation and mechanoporation, rapid efflux of potassium ions and influx of sodium, calcium, and chloride ions along with water, which causes cytotoxic neuronal edema. The energy dependent glutamate uptake mechanisms in the presynaptic nerve terminals and astrocytes fail, resulting in extracellular accumulation of glutamate and prolongation of the stimulation of excitotoxic cell membrane receptors including N-methyl-D-aspartate [NMDA], kainite and alpha-amino-3-hydroxy-5-methyl-4-isoxazole [AMPA] receptors. Additional calcium and sodium ions then enter the neuron through open NMDA, AMPA and kainite receptor channels. Further disruption of cellular organelles and functions ensues when proteases, calpains, endonucleases, phospholipases and other catabolic enzymes are released.

The brain cells and regions of the brain exhibit a selective topographic vulnerability to excitotoxic injury because of the differential densities of the membrane glutamate receptors on different neurons in different regions of the brain. The parts of the brain that are responsible for cognitive and memory functioning, the limbic system, are one of the regions with the highest densities of glutamate receptors and patients with these types of injuries are more likely to suffer from cognitive and memory impairments.

Perturbation and mechanoporation of cell membranes also result in the uncontrolled influx and efflux of ions, amino acids, enzymes, and peptides, which help create a self-sustaining cascade that eventually results in cell damage and death. Glutamate also trans-migrates the damaged cell membrane from the intracellular compartment to the extracellular compartment to bind to more glutamate receptors.

Cerebral blood flow and autoregulation is also impaired by electrical injuries of the brain. Cerebral blood flow is dependent on the balance of vasodilators and constrictors derived from the endothelium, neuronal innervations, and perfusion pressure. Autoregulation is the ability of

the brain blood vessels to maintain a constant cerebral blood flow in spite of fluctuations in the cerebral perfusion pressure. Autoregulation is maintained by changes in the resistance of cerebral arterioles, which depends upon constriction of smooth muscles in the vascular walls, oxygen, carbon dioxide, pH, the sympathetic and cholinergic nervous system, prostaglandins, arginine vasopressin and vasointestinal polypeptide. At the local level glial-neuronal interactions are also important. The impairment and loss of regional cerebral autoregulation follows with the excitotoxic impairment of the neuronal and axonal membranes, which results in additional regional microvascular and perfusion injuries of the brain cells.

Free radical injury is another final common pathway of brain injury, whereby free radicals, which are atoms, molecules, or ions with unpaired electrons, become highly chemically active. Electrical injury of the brain generates free radicals during and after the insult, which in turn perpetuate more cellular injury and opening of the blood-brain barrier and further microvascular injury. Free radicals result in membrane peroxidation and disruption, DNA oxidation, protein nitration and cell damage.

Cytokines are polypeptide mediators that activate inflammatory responses. Following ECT injury microglia induce reactive and diffuse astrocytosis via release of cytokines like TNF, IL-1, IL-6, and IFN-gamma. These cytokines also have toxic effects on oligodendrocytes, which can lead to oligodendrocyte injury and death and white matter changes, rarefaction, and demyelination.

In summary, therefore, just like other modalities of brain injury [thermal and kinetic energy injuries, and hypoxic-ischemic injury], which all share common pathophysiologic pathways in varying degrees, electrical injury of the brain possesses multi-modal pathophysiological cascades, which result in cell damage and death of neuronal and glial cells of the brain. As time progresses, following injury, neuronal and glial cells begin to accumulate abnormal proteins through abnormal enzymatic reactions, which will progress to neurodegeneration. The underlying mechanisms for these abnormal accumulation of abnormal proteins have not been fully elucidated, but chronic neuroinflammation following brain injury has been presented as a mechanism.

3. How do the brain injuries caused by ECT manifest?

ECT induced brain injury is a diffuse type of brain injury similar to diffuse traumatic brain injury, therefore it can affect all domains of neurological functioning. Overtime ECT induced injuries can manifest in a variety of ways in concordance with the central limit theorem of mathematics and statistics. We cannot reasonably predict what symptoms each patient will suffer, and we cannot predict who will manifest symptoms and what time the symptoms may manifest. However, symptoms may manifest immediately, or in a delayed manner after a latent period which can range from days to weeks to months to years to decades. The symptoms and signs of ECT induced brain injury can manifest with but are not limited to cognitive and memory impairment including impaired executive functioning, mood and neuropsychiatric disorders, behavioral impairment, motor and sensory disorders and other somatic symptoms like headaches and body pain.

4. Are ECT induced brain injuries permanent?

The brain is a post-mitotic organ; therefore, all injuries of the brain are permanent injuries that cannot be completely healed, reversed, or resolved. ECT induced brain injuries are therefore permanent because they are brain injuries. All brain injuries also exhibit a cumulative outcome over time, meaning that the eventual outcome of any specified brain injury exposure is the cumulative and combined effect of all exposures over time. Therefore, clinical outcome due to ECT is a cumulative and combined effect of all her ECT's over time. Her symptoms are permanent and can progress into a neurodegenerative disease over time. Her ECT induced brain injuries and symptoms are expected to be permanent and cannot be resolved or completely reversed by any form of treatment, however, her symptoms may be managed clinically and controlled to a certain degree over time.

5. Does ECT induced brain injury appear on imaging, and why?

No ECT induced brain injury may not and are not frequently identified and diagnosed by conventional imaging modalities like the MRI and CT scan. Imaging modalities like conventional MRI and CT scans are indirect and translational modalities of studying the human brain in vivo in living patients. Unfortunately, these modalities of study possess significant limitations, which include limited resolution and capacity to locate and identify changes and pathologies in cells on the sub-cellular and micro-cellular levels. The spatial resolution capacity of CT scans and MRI's range from 0.5 mm to 2 mm, which is exponentially larger than the micro- and nano-meter or less dimensions of sub-cellular functions and structures that are involved in the entire spectrum of ECT induced brain injuries and other types of traumatic brain injuries. Therefore, many diseases like traumatic encephalopathy and other encephalopathies involving sub-cellular mechanisms and pathologies of disease may not be located or identified by imaging technics. A very good illustration of this phenomenon is concussion of the brain. When a patient suffers a concussion, conventional MRI or CT scan does not locate or identify any diagnostic or pathognomonic feature of concussions, instead these imaging modalities may identify non-specific changes like brain edema. In fact, in order to make a diagnosis of a concussion, the CT scan and MRI have to show no specific traumatic changes in the brain.

I reserve the right to amend, supplement, revise and/or modify my opinions and report, up and to the time of trial, should additional information become available.

Thank you.

Very truly yours,

MEDICO-LEGAL QUESTIONS

1. Does ECT cause brain injury?

It is a generally accepted principle and common knowledge in medicine, forensic pathology, and neuropathology that specific injury events and modalities generate predictable, reproducible, and established specific patterns and mechanisms of injuries in the cells, tissues, organs, and systems of the body. The patterns of injuries generated by the transmission of electrical energy and electroshock to the human body, and the mechanisms of sustenance of these patterns of injuries are very well-established in the medical literature and are common knowledge, which can be readily found in reference textbooks of medicine, neuroscience, and neuropathology. Yes, ECT causes brain injury and brain damage based on these generally accepted principles and common knowledge of medicine, forensic pathology, and neuropathology.

The human brain is a very unique organ that is different from other organs in the human body. The human brain is a post-mitotic organ, which means that the human brain cell or neuron does not divide to create new brain cells and rejuvenate itself. The human brain cell does not have any reasonable capacity to regenerate itself. This means that after birth we can only lose brain cells and cannot create new brain cells like other cells in other tissues and organs of the body. If a brain cell suffers an irreversible cellular injury, that brain cell is permanently damaged or dies and is not replaced by a new brain cell. Additionally, as a post-mitotic organ, the human brain exhibits the phenomenon of cumulative injury, whereby the brain cells remember and suffer from the cumulative injury effects of repeated exposure to injury over short and long periods of time. The eventual and final patho-physiological outcomes and manifestations of brain injury result from the accumulation of all the cellular injuries suffered over time. Once permanent injury has occurred, novel patho-physiological mechanisms can be instigated to result in progression of the injury into a chronic and progressive encephalopathy and brain degeneration over time. The more repetitive an injury exposure may be, the greater the likelihood of irreversible, permanent, and progressive brain damage, without any established threshold for injury or absolute or direct correlation between number of repeated injuries and predictable severity of injury.

These basic and fundamental physiology of the human brain and nervous system applies to all modalities of energy transmission to the brain and injuries of the brain including electrical energy transmission and electrical injuries of the brain.

The primary objective of an ECT machine is to generate electrical energy and transmit that energy to the human brain to intentionally cause physiological, biochemical, and anatomic

cellular injuries to the human brain cells, induce electrical excitation and generalized seizures as a perceived therapeutic agent and mechanism. As Kenneth R. Castleman's report has illustrated, the modern ECT machine generates electrical energy and delivers and transmits electrical current into the human head and brain in short pulses, as short as one millisecond, separated by a longer period during which the current is not flowing. The amount of electricity delivered to the patient's head and brain by an ECT machine can be measured in joules or in coulombs.

Modern ECT machines can deliver 100 joules of energy or one-half coulomb of charge in the United States and 200 joules and one coulomb in Europe and Asia. They are constant-current pulse generators that can automatically and continuously adjust the voltage, as necessary, to maintain the current at a specified level. The dose may be delivered at a pulse frequency of 70 Hertz [70 positive and 70 negative pulses every second, delivered in alternation] for a period of 7.2 seconds for a total of 1008 pulses. Each pulse is 0.3 milliseconds in duration with 6.84 milliseconds of dead time where the current is not flowing between pulses. The pulse frequency can be set between 10 and 70 cycles per second and the pulse can be as brief as 0.3 milliseconds. The current is typically set at 0.9 amps and thus the brain is subjected to over a thousand alternating positive and negative current pulses of almost one amp each.

According to Dr. Castleman's report, voltage equals current times resistance according to Ohm's law. The resistance of the patient's head varies and ranges from 1,440 ohms to 260 ohms prior to and during treatment, respectively. The voltage therefore can be in the range of 230 volts and can go up to 460 volts as needed to overcome the patient's resistance.

The fundamental unit and foundation of electrical signaling and functioning of the human brain and nervous system is the action potential [AP], which is created by electrogenic Sodium-Potassium [$\text{Na}^+\text{-K}^+$] membrane ionic pumps/ channels. The resting membrane potential of the human brain cell and membrane is -90mV and the generation of an AP from this resting membrane potential to depolarization at about +10 mV lasts only few 10,000th of a second [1/10,000 seconds] for the activation and inactivation of the sodium membrane channels. For a single ECT treatment the dose is delivered at about 1000 pulses at up to 460 volts per pulse. This results in 460,000 volts, which is 5 million times the resting membrane potential of a human brain cell and membrane. While the activation and generation of an AP lasts only few 10,000th of a second, the duration of each pulse of the ECT machine is about 0.3 milliseconds, with up to 70 pulses per second for up to 7.2 seconds, which is a duration that is about 70,000 times the duration of an AP.

Any factor that undermines, impairs, and alters the delicate physiological and biochemical homeostatic milieu of the human brain has a significant potential to cause brain injury and damage, if adequately sustained and persistent. The amounts of electrical energy introduced to the human brain by ECT machines can be nothing but harmful and dangerous. These amounts of energy are exponentially outside the tolerable homeostatic ranges and thresholds of the human brain and nervous system and will no doubt, and are in fact expected to cause cellular physiologic, biochemical, and anatomic injuries to the human brain. Since the human brain is post-mitotic and cannot completely regenerate itself following such injuries, and since such ECT-induced electrical injuries occur repeatedly over time, the patient who receives ECT therapy will manifest permanent and cumulative brain injury, which can be progressive over time and result in chronic encephalopathies and brain degeneration. Such brain degeneration can manifest with multi-domain neurological impairments including cognitive impairment,

mood disorders and neuro-psychiatric impairment, behavioral impairment, motor disorders and other somatic symptoms and signs.

2. What is the mechanisms of brain injury causation by ECT?

The mechanisms of sustenance of electrical injuries of the brain and other types of injuries including thermal and traumatic brain injuries from thermal and kinetic energies are very well established and are common knowledge, which can be readily found in reference textbooks of medicine, neuroscience, and neuropathology.

Electrical excitation of the brain initiates and activates mitochondrial failure of energy and Adenosine Triphosphate [ATP], membrane depolarization, excitotoxicity, free radical formation, calcium ion influx, calpain-induced proteolysis, phospholipase-induced membrane changes, mitochondrial dysfunction, caspase activation, lysosomal enzyme release including cathepsins and granzymes and ultimately neuronal and glial cell injury, neuronal death, astrocytic and microglial activation and proliferation, chronic inflammation and cytokines production, and programmed mechanisms involving specific signaling and molecular pathways that result in delayed cell death.

High-scale electrical excitation of the human brain depresses ATP synthesis with failure of membrane ion pumps, which remain persistently open, irreversible cell membrane failure, membrane perturbation and mechanoporation, rapid efflux of potassium ions and influx of sodium, calcium, and chloride ions along with water, which causes cytotoxic neuronal edema. The energy dependent glutamate uptake mechanisms in the presynaptic nerve terminals and astrocytes fail, resulting in extracellular accumulation of glutamate and prolongation of the stimulation of excitotoxic cell membrane receptors including N-methyl-D-aspartate [NMDA], kainite and alpha-amino-3-hydroxy-5-methyl-4-isoxazole [AMPA] receptors. Additional calcium and sodium ions then enter the neuron through open NMDA, AMPA and kainite receptor channels. Further disruption of cellular organelles and functions ensues when proteases, calpains, endonucleases, phospholipases and other catabolic enzymes are released.

The brain cells and regions of the brain exhibit a selective topographic vulnerability to excitotoxic injury because of the differential densities of the membrane glutamate receptors on different neurons in different regions of the brain. The parts of the brain that are responsible for cognitive and memory functioning, the limbic system, are one of the regions with the highest densities of glutamate receptors and patients with these types of injuries are more likely to suffer from cognitive and memory impairments.

Perturbation and mechanoporation of cell membranes also result in the uncontrolled influx and efflux of ions, amino acids, enzymes, and peptides, which help create a self-sustaining cascade

that eventually results in cell damage and death. Glutamate also trans-migrates the damaged cell membrane from the intracellular compartment to the extracellular compartment to bind to more glutamate receptors.

Cerebral blood flow and autoregulation is also impaired by electrical injuries of the brain. Cerebral blood flow is dependent on the balance of vasodilators and constrictors derived from the endothelium, neuronal innervations, and perfusion pressure. Autoregulation is the ability of the brain blood vessels to maintain a constant cerebral blood flow in spite of fluctuations in the cerebral perfusion pressure. Autoregulation is maintained by changes in the resistance of cerebral arterioles, which depends upon constriction of smooth muscles in the vascular walls, oxygen, carbon dioxide, pH, the sympathetic and cholinergic nervous system, prostaglandins, arginine vasopressin and vasointestinal polypeptide. At the local level glial-neuronal interactions are also important. The impairment and loss of regional cerebral autoregulation follows with the excitotoxic impairment of the neuronal and axonal membranes, which results in additional regional microvascular and perfusion injuries of the brain cells.

Free radical injury is another final common pathway of brain injury, whereby free radicals, which are atoms, molecules, or ions with unpaired electrons, become highly chemically active. Electrical injury of the brain generates free radicals during and after the insult, which in turn perpetuate more cellular injury and opening of the blood-brain barrier and further microvascular injury. Free radicals result in membrane peroxidation and disruption, DNA oxidation, protein nitration and cell damage.

Cytokines are polypeptide mediators that activate inflammatory responses. Following ECT injury microglia induce reactive and diffuse astrocytosis via release of cytokines like TNF, IL-1, IL-6, and IFN-gamma. These cytokines also have toxic effects on oligodendrocytes, which can lead to oligodendrocyte injury and death and white matter changes, rarefaction, and demyelination.

In summary, therefore, just like other modalities of brain injury [thermal and kinetic energy injuries, and hypoxic-ischemic injury], which all share common pathophysiologic pathways in varying degrees, electrical injury of the brain possesses a multi-modal pathophysiological cascades, which result in cell damage and death of neuronal and glial cells of the brain. As time progresses, following injury, neuronal and glial cells begin to accumulate abnormal proteins through abnormal enzymatic reactions, which will progress to neurodegeneration. The underlying mechanisms for these abnormal accumulation of abnormal proteins have not been fully elucidated, but chronic neuroinflammation following brain injury has been presented as a mechanism.

3. How do the brain injuries caused by ECT manifest?

ECT induced brain injury is a diffuse type of brain injury similar to diffuse traumatic brain injury, therefore it can affect all domains of neurological functioning. Overtime ECT induced injuries can manifest in a variety of ways in concordance with the central limit theorem of mathematics and statistics. We cannot reasonably predict what symptoms each patient will suffer, and we cannot predict who will manifest symptoms and what time the symptoms may manifest. However, symptoms may manifest immediately, or in a delayed manner after a latent

period which can range from days to weeks to months to years to decades. The symptoms and signs of ECT induced brain injury can manifest with but are not limited to cognitive and memory impairment including impaired executive functioning, mood and neuropsychiatric disorders, behavioral impairment, motor and sensory disorders and other somatic symptoms like headaches and body pain.

4. Are ECT induced brain injuries permanent?

The brain is a post-mitotic organ; therefore, all injuries of the brain are permanent injuries that cannot be completely healed, reversed, or resolved. ECT induced brain injuries are therefore permanent because they are brain injuries. All brain injuries also exhibit a cumulative outcome over time, meaning that the eventual outcome of any specified brain injury exposure is the cumulative and combined effect of all exposures over time.

5. Does ECT induced brain injury appear on imaging, and why?

No ECT induced brain injury may not and are not frequently identified and diagnosed by conventional imaging modalities like the MRI and CT scan. Imaging modalities like conventional MRI and CT scans are indirect and translational modalities of studying the human brain in vivo in living patients. Unfortunately, these modalities of study possess significant limitations, which include limited resolution and capacity to locate and identify changes and pathologies in cells on the sub-cellular and micro-cellular levels involved in the entire spectrum of ECT induced brain injuries and other types of traumatic brain injuries. The spatial resolution capacity of CT scans and MRI's range from 0.5 mm to 2 mm, which is exponentially larger than the micro- and nano-meter or less dimensions of sub-cellular functions and structures. Therefore, many diseases like traumatic encephalopathy and other encephalopathies involving sub-cellular mechanisms and pathologies of disease may not be located or identified by imaging technics. A very good illustration of this phenomenon is concussion of the brain. When a patient suffers a concussion, conventional MRI or CT scan does not locate or identify any diagnostic or pathognomonic feature of concussions, instead these imaging modalities may identify non-specific changes like brain edema. In fact, in order to make a diagnosis of a concussion, the CT scan and MRI have to show no specific traumatic changes in the brain.

6. Did ECT cause brain injury?

Based on the medical records and history of _____ and based on the generally accepted principles and common knowledge of medicine, neuroscience, and neuropathology, ECT was a significant and substantial contributory factor to _____ brain injury and cognitive impairment.

I have provided all my opinions and conclusions with a reasonable degree of medical certainty. Majority of my opinions in this case were provided solely based on my training, knowledge and experience as a practicing physician, forensic pathologist, and neuropathologist for over 20 years. The concepts and principles in this case are very basic and elementary concepts and principles of medicine and neuroscience.

I reserve the right to amend, supplement, revise and/or modify my opinions and report, up and to the time of trial, should additional information become available.

Thank you.

Very truly yours,

A handwritten signature in black ink, appearing to read "Omalu B.I.C.", with a long horizontal line extending to the left and a flourish at the end.

Bennet I. Omalu, MD, MBA, MPH, CPE, DABP-AP,CP,FP,NP
Clinical Pathologist, Anatomic Pathologist, Forensic Pathologist, Neuropathologist, Epidemiologist
President and Medical Director, Bennet Omalu Pathology
Clinical Professor of Medical Pathology and Laboratory Medicine, University of California, Davis

APPENDIX A

CURRICULUM VITAE AND BIBLIOGRAPHY

PART 1: CURRICULUM VITAE

BENNET I. OMALU, MD, MBA, MPH, CPE, DABP-AP,CP,FP,NP

Anatomic Pathologist/ Clinical Pathologist/ Forensic Pathologist/ Neuropathologist/ Epidemiologist
Clinical Professor of Medical Pathology and Laboratory Medicine, University of California, Davis [UC-Davis]
President and Medical Director, Bennet Omalu Pathology [BOP], Inc.
Director and Co-Founder, CereMark Pharma, LLC

The Fountains
3031 West March Lane, Suite 323
Stockton, CA 95219

bennetomalu@bennetomalu.com

Honorary Doctorate Degrees:

1. Doctor of Science
Westminster College
Fulton, Missouri, September 15, 2016
2. Doctor of Science
Xavier University of Louisiana
New Orleans, Louisiana, May 7, 2016
3. Doctor of Science
Royal College of Surgeons in Ireland
Dublin, Ireland, June 7, 2017

Degrees and Certifications:

1. Board Certification in Anatomic Pathology (AP)
Diplomate, American Board of Pathology
American Board of Pathology, July 2002.
2. Board Certification in Clinical Pathology (CP)
Diplomate, American Board of Pathology
American Board of Pathology, July 2003.
3. Board Certification in Forensic Pathology (FP)
Diplomate, American Board of Pathology
American Board of Pathology, November 2004.
4. Board Certification in Neuropathology (NP)
Diplomate, American Board of Pathology
American Board of Pathology, September 2005.
5. Board Certification in Medical Management
Certified Physician Executive [CPE]
Certifying Commission in Medical Management
American College of Physician Executives, February 2011
6. Masters in Public Health (MPH), Epidemiology
University of Pittsburgh, Graduate School of Public Health
Pittsburgh, Pennsylvania, April 2004.
7. Masters in Business Administration [MBA]
Tepper School of Business, Carnegie-Mellon University
Pittsburgh, Pennsylvania, May 2008.
8. One year clinical Internship Certificate, general/ family practice
University of Nigeria Teaching Hospital, Enugu, Nigeria, January 1992.

9. Bachelor of Medicine and Bachelor of Surgery (M. B., B. S.)
University of Nigeria, Enugu, Nigeria, June 1990.
10. United States Medical Licensing Examinations (Steps I and II), September 1993.
11. United States Medical Licensing Examination Step III, May 1998.
12. Grade 1 certificate in the Theory of Music, The Royal Schools of Music, London, England, 1981.

Professional and Post-Graduate Education and Training

1. College of Medicine,
University of Nigeria, Enugu, Nigeria. July 1984 - July 1990
2. House Physician,
Department of Pediatrics,
Enugu General Hospital, Enugu, Nigeria. August 1990 - Dec. 1990
3. Internship in General/ Family Practice,
University of Nigeria, Hospital, Enugu, Nigeria. January 1991 - January 1992
4. Emergency Room Physician,
Jos University Hospital, Jos, Nigeria. March 1992 - October 1994
5. Visiting/ Research Scholar,
Cancer Epidemiology, Dept. of Epidemiology,
School of Public Health, University of Washington, Seattle. October 1994 - June 1995
6. Pathology Residency, Anatomic/ Clinical
College of Physicians and Surgeons of Columbia University,
Harlem Hospital Center, New York City. July 1995 - June 1999
7. Fellowship training in Forensic Pathology,
Allegheny County Coroner's Office
University of Pittsburgh, Pittsburgh, Pennsylvania. July 1999 - June 2000
8. Fellowship training in Neuropathology,
University of Pittsburgh Medical Center
University of Pittsburgh, Pittsburgh, Pennsylvania. July 2000 - June 2002
9. Masters in Public Health: Epidemiology
Graduate School of Public Health
University of Pittsburgh, Pittsburgh, Pennsylvania June 2002 – April 2004

10. Masters in Business Administration
Tepper School of Business
Carnegie Mellon University, Pittsburgh, Pennsylvania August 2005 – May 2008

Medical Licensure

1. License of practice as a physician, unrestricted, State of Indiana September 1998
2. License of practice as a physician, unrestricted, State of Pennsylvania October 1998
3. License of practice as a physician, unrestricted, State of Hawaii January 2003
4. License of practice as a physician, unrestricted, State of California June 2007

Professional Medical Affiliations and Memberships

1. Member, American Association of Physician Leadership, 2006 – present
2. Member, American Association for the Advancement of Science [AAAS], 2005 – present
3. Fellow, College of American Pathologists (CAP), 1995 – present
4. Fellow, American Society of Clinical Pathologists (ASCP), 1995 – present
5. Member, American Association of Neuropathologists (AANP), 2002 – present
6. Member, National Association of Medical Examiners (NAME), 1999 – present
7. Member, American Academy of Forensic Sciences, 2004 – present
8. Member, United States and Canadian Academy of Pathology, 2003 – present
9. Member, International Academy of Pathology, 2003 – present
10. Fellow, American College of Epidemiology, 2004 – present
11. Member, American Association of Public Health Physicians, 2004 – present
12. Member, American Public Health Association, 2004 - present
13. Member, American Society for Investigative Pathology, 2004 - present
14. Member, American Medical Association (AMA), 2002 - present
15. Member, San Joaquin Medical Society, 2009 – present
16. Member, California Medical Society, 2009 – present
17. Member, California Society of Pathologists, 2015 - present
18. Member, Union of American Physicians and Dentists, 2007 - present
19. Member, Pennsylvania Medical Society, 2003 - 2007

20. Member, Allegheny County Medical Society, 2003 – 2007
21. Member, New York County Medical Society, 1997 - 1999
22. Member, Nigerian Medical and Dental Council, 1990
23. Member, Association of Nigerian Physicians in the Americas, 2017 - present

Appointments

1. Consulting Forensic Pathologist-Neuropathologist, Kaiser Permanente Hospitals, Central California, February 2018 – Present.
2. Physician Associate and Professor, Department of Medical Pathology and Laboratory Medicine, University of California, Davis, February 2018 – Present.
3. Consulting Forensic Pathologist-Neuropathologist, Yosemite Pathology Medical Group, January 2018 – Present.
4. Consulting Forensic Pathologist-Neuropathologist, Lake County, California, February 2018 - Present.
5. Visiting Professor, Emory University, Department of Pathology and Laboratory Medicine, March 2017.
6. Clinical Professor, Department of Medical Pathology and Laboratory Medicine, University of California, Davis, January 2017 – Present.
7. Co-Director/Co-Founder, Taumark, Inc, Better Brain Diagnostics, May 2013 – present.
8. Chief Medical Examiner, Washington, D.C. Appointed on October 11, 2013. Declined Offer.
9. Co-Director, Brain Injury Research Institute, West Virginia University/NorthShore University Health System, November 2009 – present.
10. Visiting Professor, Department of Neurosurgery, West Virginia University, Dec. 2009 – Dec. 2011
11. Member, NFL Players Association Concussion and Traumatic Brain Injury Committee, December 2009 – 2012.
12. Visiting Professor, Rockefeller Institute of Neuroscience, Morgantown, Virginia, August 2009 – April 2010.
13. Chief Medical Examiner, San Joaquin County, California, September 2007 – March 2018.
14. Associate Clinical Professor, Department of Medical Pathology and Laboratory Medicine, University of California, Davis, September 2013 – January 2017.

15. Clinical Professor of Pathology, Department of Pathology, University of California, Davis, March 2012 – July 2013.
16. Associate Physician Diplomate, Medical Pathology and Laboratory Medicine, University of California-Davis Medical Center, March 2012 – July 2013.
17. Associate Clinical Professor of Pathology, Department of Pathology, University of California, Davis, May 2008 – January 2012.
18. Adjunct Assistant Professor of Pathology, University of Pittsburgh, Pittsburgh, Pennsylvania, June 2010 – 2012.
19. Assistant Clinical Professor of Epidemiology, Department of Epidemiology, Graduate School of Public Health, University of Pittsburgh, March 2004 – 2008
20. Clinical Associate Professor of Pathology and Clinical Instructor, Department of Pathology, University of Pittsburgh, Pittsburgh, Pennsylvania, May 2003 – 2009
21. Attending Forensic Pathologist, Allegheny County Coroner's Office, July 2002 – March 2007
22. Attending Forensic Neuropathologist, Allegheny County Coroner's Office, July 2002 – March 2007
23. Associate Forensic Pathologist, Allegheny County Coroner's Office, July 2000 – June 2002

Hospital Admissions and Practice Privileges

1. University of California, Davis, Health System/ Medical Center March 2012 to July 2013
Department of Medical Pathology and Laboratory Medicine February 2018 to Present
2315 Stockton Blvd
Sacramento, CA 95817
2. Contra Costa Regional Medical Center January 2013 to Present
Department of Pathology
2500 Alhambra Avenue
Martinez, CA 94553

3. San Joaquin General Hospital September 2007 to Present
Department of Pathology
500 West Hospital Road
French Camp, CA 95231

4. Yosemite Pathology Medical Group August 2017 to Present
Business Associate- Autopsy Services
2625 Coffee Road
Modesto, CA 95355

Journal Editorial and Peer Review Experience

1. Associate Editor, Neurosurgery Journal, Sports and Rehabilitation Section, September 2009 – 2014
2. Reviewer, Militarily Relevant Peer Reviewed Alzheimer's Disease Research Program (MRPRA), 2012: American Institute of Biological Sciences [AIBS], Scientific Peer Advisory and Review Services Panel.
3. Reviewer, Nigerian Journal of Clinical Practice, February, 2011 to 2014
4. Reviewer, Nigerian Journal of Surgery, October 2011
5. Reviewer, The Journal of Neuropsychiatry and Clinical Neurosciences, April 2012
6. Reviewer, The Journal of Forensic Nursing, June 2009, October 2012, February 2013
7. Reviewer, Forensic Science, Medicine and Pathology, November 2012

Consulting and Peer Review Assignments

1. Consulting Forensic Pathologist/ Neuropathologist, Cyril H. Wecht and Pathology Associates Inc. June 2000 – January 2006.
2. Consulting Forensic Neuropathologist, Office of the Chief Medical Examiner, Commonwealth of Virginia: August 2006 – December 2012
3. Consulting Forensic Neuropathologist, Office of the Coroner/Medical Examiner, Clark County, Las Vegas, Nevada, September 2007 – December 2012

4. Consulting Forensic Neuropathologist, Office of the Coroner/Medical Examiner, Washoe County, Reno, Nevada, 2009 – present
5. Consulting Forensic Pathologist, Solano County Coroner's Office, California, 2011 - 2012
6. Consulting Neuropathologist, Conemaugh Memorial Hospital, Johnstown, Pennsylvania: August 2003 – August 2007
7. Consulting Expert Witness/Forensic Pathologist/Neuropathologist, Public Defender's Office, County of Sacramento, California, April 2010 – present.
8. Consulting Forensic Neuropathologist, Medical Examiner's Office, Allegheny County, Pittsburgh, Pennsylvania, January, 2011.
9. Consulting Forensic Neuropathologist, Medical Examiner's Office, County of Summit, Akron, Ohio. October, 2011.
10. Consulting Forensic Neuropathologist, American Forensics, Dallas, Texas. October, 2011.

Congressional Hearing, Testimony and Briefing

The Congress of the United States

1. One Hundred and Eleventh Congress, Congress of the United States, House of Representatives, Committee on the Judiciary, Field Hearing: Legal Issues Relating to Football Head Injuries, Part II, Monday, January 4th, 2010.
2. One Hundred and Eleventh Congress, Congress of the United States, House of Representatives, Committee on the Judiciary, Judiciary Forum: Head and Other Injuries in Youth, High School, College and Professional Football, Monday, February 1, 2010.
3. One Hundred and Fourteenth Congress, Congress of the United States, House of Representatives: Dr. Omalu's Briefing on his Work and Legacy. Energy and Commerce Committee Room, 2123 Rayburn HOB. Tuesday, January 12, 2016.

California State Assembly

1. Testimony in support of AB 2007- Concussion Management for Youth Sports Leagues, Committee on Arts, Entertainment, Sports, Tourism and Internet Media, Tuesday, May 3, 2016.
2. Testimony in support of SB 1303- An act to amend Sections 24000, 24009, and 24010 of the Government Code, relating to local government [Coroner: County Office of the Medical Examiner], Senate Committee on Governance and Finance, California State Senate, April 11, 2018.

3. Testimony in support of SB 1303, Senate Committee on Public Safety, California State Senate, April 24, 2018.
4. Testimony in support of SB 1303, Assembly Committee on Local Government, California State Assembly, June 20, 2018.
5. Testimony in support of SB 1303, Assembly Committee on Public Safety, California State Assembly, June 26, 2018.

New York State Assembly

1. Testimony in support of A4448- An act to amend the public health law, in relation to prohibiting children thirteen years old and younger from playing tackle football. Roundtable discussion before Concussion movie screening to New York State Assembly and New York State Senate Members. Wednesday, May 4, 2016.

Selected Honors, Awards, Recognition and Achievements

1. 2019 Medgar Evers Freedom Fighter Award, National Association for the Advancement of Colored People [NAACP], Stockton, California, November 16, 2019, Stockton, California.
2. Distinguished Alumnus- Medical Discovery Award, College of Medicine, University of Nigeria, Enugu, Nigeria, September 19, 2019.
3. Recognized as a member of the Trailblazer of the Lab Power List, 2019. The Pathologist, August 2019. <https://thepathologist.com/power-list/2019>
4. Recognized as one of the “100 Figures Who Shaped The NFL’s First Century”: “Perhaps the single most significant name in football post-2000, Bennet Omalu—the Nigerian-born doctor who first discovered evidence of brain trauma in the body of former Steelers great Mike Webster—changed the way everyone from players and coaches to administrators and concerned parents have approached the violent sport”. 100 Figures Who Shaped the NFL’s First Century. By The Sports Illustrated Staff, August 28, 2019. <https://www.si.com/nfl/2019/nfl-100-most-influential-figures-all-time>
5. 2019 Peace And Justice Award, California State University, Sacramento, College of Health and Human Services, Center for African Peace and Conflict Resolution, Sacramento, April 27, 2019.
6. Leadership Award, Carson Scholars Fund, April 13, 2109, San Diego, California.
7. Pioneer Award, 2019 Champions of Health Awards, National Medical Fellowships, Bay Area, March 2, 2019, Berkeley, California.
8. Appointed Member, Traumatic Brain Injury Advisory Board, California Department of Rehabilitation, State of California Health and Human Services Agency, January 1, 2019 to May 31, 2021.
9. Department of the Army, California Army National Guard, Sacramento, California, Nigerian 68W Familiarization/SES Donald Get [AFRICOM] Visit to California, Invitational Appearance Based on Military Necessity, August 27, 2018.
10. William Steiger Memorial Award, 2018: American Conference of Governmental Industrial Hygienists [ACGIH]: For Efforts Contributing to the Advancement of Occupational Health and Safety. March 2018.
11. Honorary Member Award, Academy for Sports Dentistry, June 23, 2017, San Francisco, California.
12. Residents Choice Award, 2017, Emory University School of Medicine, Department of Pathology and Laboratory Medicine, March 13, 2017.

13. Joint Members Resolution No. 116 to Commend Dr. Bennet Omalu for Exemplary Record of Medical Achievements, State of California Legislature, February 22, 2017.
14. Certificate of Recognition, Board of Supervisors, San Joaquin County, for contributions and distinguished service to San Joaquin County, January 10, 2017, Stockton, California.
15. Outstanding Achievement in Medicine Award, The San Joaquin Medical Society, Stockton, California, December 15, 2016.
16. Rescuer of Humanity Award, 2016, Values-in-Action Foundation, Cleveland, Ohio, December 6, 2016.

108. "Taupathy and Chronic Traumatic Encephalopathy" Grand Rounds, Department of Pathology, University of California-Davis, Sacramento, California. April 18, 2011.
109. "Long Term Effects of Repeated Impacts to the Head in American Athletes". Brain Rehabilitation and Injury Network. Thinktank 2011, Long Beach, California. March 27, 2011.
110. "Chronic Traumatic Encephalopathy in American Athletes". Visiting Professor, Grand Rounds, University of California, San Francisco, Department of Neurology, Memory and Aging Center, March 11, 2011.
111. Motivational Lecture to One Hope School, County Operated Schools and Programs, San Joaquin County Office of Education. October 24 and 25, 2011
112. "Motivational Lecture and Forensics: the value and importance of education" San Joaquin County Youth Leadership Academy, District Attorney's Office, June 29, 2011.
113. Employee Personal Motivation Lecture. Employee Mentoring Program, Equal Employment Opportunity Office, San Joaquin County, Administration Building, 44 North San Joaquin Street, June 16, 2011.
114. Keynote Speaker, Thirteenth Annual San Joaquin County Diversity Luncheon. San Joaquin County, California. September 30, 2010.
115. "Becoming a Forensic Pathologist: My Experience and Perspective". Guest Lecturer, First and Second Year Medical Students, School of Medicine, University of California, Davis, October 22, 2010.
116. "Chronic Traumatic Encephalopathy in Sports". 2010 Advanced Team Physician Course, American College of Sports Medicine, American Medical Society for Sports Medicine and American Orthopaedic Society for Sports Medicine. Washington, DC, December 10, 2010.
117. "Emerging Technology in the Evaluation and Treatment of Concussion". 2010 Advanced Team Physician Course, American College of Sports Medicine, American Medical Society

- for Sports Medicine and American Orthopaedic Society for Sports Medicine. Washington, DC, December 10, 2010.
118. "Epidural Hemorrhages" Visiting Professor Lecture, Neurosurgery Residents, Department of Neurosurgery, West Virginia University, August 17, 2010
 119. "Pharm Parties". 10th Annual San Joaquin County Child Abuse Prevention Symposium, Stockton, California, April 14, 2010.
 120. "The Forensic Pathology of Chronic Traumatic Encephalopathy". 2010 Independent Retired Players Summit and Conference, Las Vegas, Nevada, April 17, 2010.
 121. "Chronic Traumatic Encephalopathy". The Amen Clinic, Newport Beach, California, March 20, 2010.
 122. "The forensic pathology of Chronic Traumatic Encephalopathy in American Athletes: the journey thus far." Advanced Education Seminar, Lakewood Orthopedics & Sports Medicine, Speakers Bureau Member, Dallas, Texas, January 23, 2010.
 123. "Emerging Forensic Issues of Chronic Traumatic Encephalopathy in American Athletes". Presenter, 2009 National Educational Conference, American Association of Legal Nurse Consultants, Phoenix, Arizona, April 24, 2009.
 124. "The stressors in the life of a physician and forensic pathologist". Sociology of Health & Illness Course, University of the Pacific, Stockton, California, March 26, 2009.
 125. "New Technologies in Neuropathology and Neuropathology of Concussion in Athletes". Presenter, Emerging Technology and Techniques in Neurosurgery, Caesar's Palace, Las Vegas, November 8, 2008, Departments of Neurosurgery, West Virginia University, Morgantown, WV, and Allegheny General Hospital, Pittsburgh, PA.
 126. "The Forensic Pathology of Chronic Traumatic Encephalopathy in Professional American Athletes". Key Note Speaker, American Association of Legal Nurse Consultants, West Virginia, Upper Ohio Valley Chapter, 2008 meeting, October 17, 2008, Wheeling, West Virginia.
 127. "The Pathophysiology of Traumatic Brain Injury". Visiting Professor/Guest Lecturer, October 1, 2008, Department of Neurosurgery, West Virginia University, Morgantown, West Virginia.
 128. Key Note Speaker, "Helping People One Test at a Time", National Laboratory Week, Harlem Hospital Center, New York City, April 25, 2008
 129. "The Link between the Field and Dementia" Rendezvous II: An International Sports Medicine Conference, March 25, 2008, Caesars Palace, Las Vegas. 17th Annual Meeting of The American Medical Society for Sports Medicine (AMSSM) and The Canadian Academy of Sports Medicine (CASM), March 25 – 29, 2008.

130. "The Neuropathology and Delayed Sequelae of Concussion in NFL Players". The National Concussion Summit: Concussion in Sports: The Under-Recognized Public Epidemic The Sports Concussion Institute. Centinela Freeman Regional Medical Center, Marina Campus, Marina Del Rey, California at The Marriott Hotel, 4100 Admiralty Way, Marin Del Rey, CA 90292, Friday, April 20th, 2007.
131. "Football Induced Chronic Traumatic Encephalopathy" November 2006, meeting of the Pittsburgh chapter of the National Association of Neurological Nurses, Waterfront, Homestead, Pittsburgh.
132. "The forensic perspectives of traumatic brain injury". 2005 Annual Nursing Conference: traumatic brain injury, from ER management to ICU, rehab, organ donation and Trisha Meili a.k.a. Central Park Jogger. Allegheny General Hospital Pittsburgh, Pennsylvania. November 18, 2005
133. 'Mortality following bariatric surgery'. Bariatric Surgery Research Mini-symposium, Minimally Invasive Surgery Center, Department of Surgery, University of Pittsburgh, Pennsylvania, January 17, 2004.
134. "My professional life as a forensic pathologist and neuropathologist". A career development presentation to selected high school students of the Pittsburgh Public School System. April 14, 2004.
135. "My professional life as a forensic pathologist and neuropathologist". A career development presentation to students of the Saint Benedict the Moor Catholic School, 2900 Bedford Avenue, Pittsburgh, Pennsylvania 15219. March 5, 2004.
136. 'The medico-legal autopsy'. University of Pittsburgh Chapter of the American Inns of Court, Pittsburgh, Pennsylvania. April, 2002.
137. 'My professional experience as a Forensic Pathologist'. Graduating Lecture, 2002 certificate program class, The Cyril H. Wecht Institute of Forensic Sciences, School of Law, Duquesne University, Pittsburgh, Pennsylvania. November, 2002.
138. "The mechanisms of trauma in motor vehicular accidents". Surgical grand-rounds, Department of Surgery, The Mercy Hospital System, Pittsburgh, Pennsylvania. May, 2000.

Post-Graduate Medical Teaching Experience-1

1. Supervised medical students during the Emergency Medicine rotation, University of Jos, Jos, Nigeria, January 1991-September, 1994.
2. Taught a patho-physiology course for the physician assistant program at the Harlem Hospital Center, New York, NY. July, 1996 – June, 1999.
3. Presented weekly clinico-pathologic conferences for the departments of pathology, surgery, internal medicine, obstetrics and gynecology, Harlem Hospital Center, New York, NY. July, 1995 – June, 1999.
4. Taught medical students and residents, forensic pathology and neuropathology, University of Pittsburgh, July, 1999 – June, 2002.
5. Taught a workshop in the patho-physiology course, Masters in Public Health program, Graduate School of Public Health, University of Pittsburgh, September, 2002 – 2007.
6. Supervised residents during rotation in forensic pathology, University of Pittsburgh, July, 2002 – 2007.
7. Taught monthly forensic neuropathology workshops to residents and fellows in pathology, neurology and neurosurgery, University of Pittsburgh, 2004 – 2007.
8. Taught monthly neuropathology workshops to residents in pathology, Conemaugh Memorial Hospital, Johnstown, Pennsylvania, January 2005 – 2007.
9. Presented monthly trauma rounds to surgery residents, Mercy Hospital of Pittsburgh, January 2006 – 2007.
10. Presented quarterly one-day introductory autopsy conferences for the emergency medicine technology program of Allegheny County Community College, April, 2006.
11. Forensic pathology and neuropathology grand round lectures, internal medicine, family practice and surgery residents, San Joaquin General Hospital, French Camp, California, 2009 – 2012.
12. Forensic neuropathology brain cutting workshops for pathology residents and fellows, University of California at Davis, Department of Pathology, 2009 – 2013.
13. Forensic neuropathology brain cutting workshops for neurology residents and fellows, University of Nevada, Las Vegas at the Clark County Coroner's Office, 2011 – 2012.
14. Mentoring and teaching residents and medical Students and covering the autopsy service, and forensic neuropathology service, Department of Medical Pathology and Laboratory Medicine, University of California at Davis, March 2012 – July 2013.

15. Microscopy sessions and slides review, residents and medical students, Department of Medical Pathology and Laboratory Medicine, University of California at Davis, September 2013 to present.
16. Grand rounds lectures, didactic lectures in laboratory management, forensic pathology and neuropathology for medical students, residents and fellows, Department of Medical Pathology and Laboratory Medicine, UC-Davis Medical School, 2008 – Present.
17. Grand Rounds, Department of Medical Pathology and Laboratory Medicine, UC-Davis, February 1, 2016: What a Pathologist can Learn from Hollywood: Dr. Omalu's Experience.
18. Brain Cutting Workshops and Signouts, Medical Students, Graduate Medical and Non-Medical Students, Residents and Fellows, Department of Medical Pathology and Laboratory Medicine, University of California- Davis Medical School. January 2018 – Present.

Research Grant

1. \$24, 750.00 grant from The Pittsburgh Foundation for a research project on Loss of heterozygosity as predictors of grade and outcome in meningiomas in collaboration with John Lee, M.D. University of Pittsburgh.
2. \$200,000.00 grant from The Hazel Ruby Mcquain Charitable Trust, West Virginia to the Brain Injury Research Institute, for research into Chronic Traumatic Encephalopathy, 2010-2011.

Boards and Committees Memberships

1. Child Death Review Board, San Joaquin County, California, 2007 – 2018
2. Infant Death Review Board, San Joaquin County, California, 2007 – 2018
3. Elder Death Review Board, San Joaquin County, California, 2007 – 2018
4. Homicide Review Committee, San Joaquin County, California, 2010 – 2015
5. San Joaquin County Trauma Audit Committee, San Joaquin County Emergency Medical Services Agency, California, 2014 – 2018
6. Member, Traumatic Brain Injury Advisory Board, State of California, 2018 - Present

Broadway Theatre and Hollywood Motion Picture Coverage

1. Concussion, drama film, Sony Pictures, starring Will Smith as Bennet Omalu. December 25, 2015. Written and directed by Peter Landsman, produced by Scott Free Productions and the Shuman Company.
2. League of Denial: The NFL's Concussion Crisis. Documentary Movie. Frontline, Public Broadcasting Service [PBS]. October 8, 2013.
http://www.pbs.org/wgbh/frontline/film/league-of-denial/?utm_source=email&utm_medium=social&utm_campaign=share_button
3. EST/Sloan presents Headstrong, by Patrick Link; directed by William Carden. The Ensemble Studio Theatre, New York City, New York. April/May 2012.

Selected Book Coverage

1. Concussion by Jeanne Marie Laskas. Random House, New York, USA. 2015 [New York Times Best Seller]
2. League of Denial. The NFL, Concussions, and the Battle for Truth by Mark Fainaru-Wada and Steve Fainaru. Crown-Archetype, Random House, New York, USA. 2013.
3. The Death Penalty on Trial, Crisis in American Justice, by Bill Kurtis, PublicAffairs™, 2004.

Selected Media Coverage

1. Medical Examiners under Fire. CBS Sunday Morning, CBS News, June 14, 2020.
2. The Truth Seeker. Sitting Down With Bennet Omalu, President and Medical Director of Bennet Omalu Pathology, by Luke Turner, The Pathologist, September 27, 2019.
