...PAROXETINE INDUCED SUICIDE RISK REVEALED TO FDA AND DOCTORS...

Suicide risks discovered in clinical trials REVEALED to FDA and doctors

Dr. Sachman WOULD NOT HAVE PRESCRIBED
Paroxetine for Stewart Dolin

HAPPENED INSTEAD

Suicide risks discovered in clinical trials NOT REVEALED to FDA and doctors, DATA MISREPRESENTED Dr. Sachman PRESCRIBED Paroxetine for Stewart Dolin, not knowing it was associated with PAROXETINE INDUCED SUICIDE for people his age

1989: GSK submitted a "New Drug Application" for Paxil (Paroxetine) which obscured an approximately 8-fold increased risk of suicidal attempts and suicide, through improper use of 2 "run in" suicides and 5 "run in" suicide attempts. This changed a danger signal to a reassuring one. As a result, doctors and the FDA were not warned about the increased risk GSK knew or should have known about.
