Progress Notes

Turley, Richard (M.D.) at 1/30/2015 5:10 PM

Version 1 of 1

Author Type: Physician Status: Signed

CT then likely Core Needle Biopsy - discussed with patient.

FINAL PATHOLOGIC DIAGNOSIS

A.) Right neck lymph node, fine needle aspiration, cytologic preparation:

- Atypical: Cytologic findings support an extensively necrotic neoplasm, see comment.

- Cytologic evaluation is partially limited by tumor necrosis and further limited by air drying artifact, see comment.

ANDREW ZOLTAN MIKLOS M.D.

Turley, Richard (M.D.) at 1/30/2015 5:10 PM (continued)

Version 1 of 1

Comment

The prepared smears show an extensively necrotic neoplasm. Cytologic evaluation is partially limited by tumor necrosis (no viable tumor present for evaluation) and further limited by the presence of air drying artifact. Definitive classification is not possible on this specimen. Recommend further evaluation. Dr. Kunkel has reviewed this case in intradepartmental consultation and concurs with the above diagnosis (1/30/15.)
