[Redacted]

Attached is an old document I used to use regarding the organophosphate question... I don't know if there is anything newer...so I have included David on as well.

I will leave the arsenic question again to Erin.

Regards,

Donna

Donna,

Please let me know if you found an appropriate way to answer this request about Arsenic by one of our distributors. In addition we would like to prepare a response to clarify to one of our customers that glyphosate is not an organophosphate.

Thanks for your help.

I have included Erin on this e-mail as she has been the lead for this issue.

I will let Erin give you more details but we cannot certify that our Roundup Branded products do not contain arsenic. Arsenic is an impurity in a raw material used in the manufacture of Roundup branded formulations. Thus there may be trace amounts in the end-use product. If present the level would not exceed lawful limits or pose a health hazard.

Subject: Arsenic - Roundup

Good morning, Donna.

We have had a couple of requests from regional authorities in Mexico and Colombia asking for certifications that our Roundup does not contain Arsenic. Do we have a Backgrounder or a similar document that treats this issue?

Thank you,
